SUMMARY

Backend Engineer with ~7 years of experience designing and scaling distributed systems, with strong expertise in Python (FastAPI, Django), microservices, and event-driven architectures. Specialized in building AI-native applications using Graph RAG, LLM orchestration, and vector/graph databases (Neo4j, Pinecone). Experienced in leading engineering teams, owning system design decisions, and delivering production-grade cloud-ready solutions.

SKILLS

Backend: Python (FastAPI, Django), Celery, SQLAlchemy, REST APIs, Microservices

Databases: PostgreSQL, Neo4j, Redis, MongoDB

AI & Machine Learning: LLM Integration, Graph RAG, LangChain, MCP, Vector Search & Embeddings

DevOps: Docker, CI/CD, Nginx, AWS (EC2, S3, API Gateway); Familiar with Kubernetes, Azure

Frontend: React, TypeScript, JavaScript

Tools & Practices: Git, Shell Scripting

PROFESSIONAL EXPERIENCE

Senior Software Engineer II | **Cefalo** | Jan 2025 – Present

Tech: Python, FastAPI, Neo4j, LangChain, LangGraph, Graph RAG, MCP, React, TypeScript, Docker

- Promoted to SSE II for contributions to AI-native product development within a cross-functional engineering team
- Architected an internal employee graph application using Graph RAG and MCP, enabling natural language queries over complex organizational relationships stored in vector and graph databases (Pinecone/Neo4j)
- Built a FastAPI backend supporting intelligent query routing, auto-generated Cypher queries, and multi-provider LLM integration—reducing manual HR data lookup workflows
- Integrated vector search and semantic embeddings (FastEmbed, HuggingFace) for context-aware information retrieval and summarization across employee records

Senior Software Engineer I | **Cefalo — Wirescan AS, Norway (Remote)** | Dec 2024 – Dec 2025

Tech: Python, PostgreSQL, Redis, Mapbox, Docker, CI/CD, AG-Grid, Dash, Plotly

- Owned backend development for digitising power cable maintenance and data onboarding workflows serving offshore and energy clients
- Built an automated onboarding portal to extract cable and turbine data from PDF, CSV, and Excel files—cutting manual data entry effort by 90%
- Developed real-time monitoring dashboards (Dash + Plotly) enabling field operators and analysts to track key performance metrics across offshore energy infrastructure
- Built interactive geographic visualizations using Mapbox for cable assets, including turbines, substations, and joints—improving spatial awareness for field teams
- Delivered high-performance AG-Grid data tables, signal analysis tools, and event inspection features supporting end-to-end diagnostic workflows

Software Engineer | **SELISE Digital Platforms** | April 2022 – May 2024

Tech: Python, Django, FastAPI, Celery, Redis, Docker, Microservices, NodeJS, ExpressJS

- Worked directly with Swiss clients across multiple projects, owning requirement analysis, technical design, and end-to-end software delivery
- Designed and built integrated Django + Shopify + Wagtail CMS solutions for e-commerce and content management use cases
- Led a team of 3–4 engineers, conducting code reviews and coordinating delivery across cross-functional stakeholders
- Built and maintained microservice-based backends using FastAPI and Django, with Celery and Redis for async task processing
- Managed server deployments and maintained production system reliability through proactive defect monitoring and resolution

Backend Engineer (Part-Time) | Meghna Cloud | June 2023 – Dec 2024

Tech: Python, Django, OpenStack, Kubernetes, Redis, Apache Airflow, Microservices, WebSocket

- Designed and maintained REST APIs supporting a cloud platform built on OpenStack infrastructure
- Built real-time communication features using Django Channels for live event and notification delivery
- Implemented CI/CD pipelines and managed Kubernetes-based deployments for continuous and reliable delivery
- Built and maintained Airflow data pipelines, ensuring data integrity across cloud workflows
- Collaborated with NOC and SOC teams to diagnose and resolve infrastructure-level incidents
- Mentored junior developers through code reviews and architectural guidance

Lead Software Engineer | Cramstack | September 2021 – April 2022

Tech: Python, Django, AWS (EC2, S3, API Gateway), Docker, Web3

- Led design and development of a SaaS-based decentralized Web3 application on AWS infrastructure
- Architected backend services using Django and AWS API Gateway, with S3 for scalable asset storage
- Established coding standards, test coverage practices, and code review processes across the engineering team

Senior Python Developer | Bdtask Ltd. | February 2021 – September 2021

Tech: Python, JavaScript, AWS Lambda, REST API, Linux

- Developed and maintained REST APIs and serverless functions using AWS Lambda for scalable, event-driven workloads
- Collaborated directly with stakeholders to translate business requirements into technical designs and working solutions
- Applied agile methodologies across the full development lifecycle from scoping through delivery

Jr. Software Engineer | Codesmith Tech Ltd. | September 2019 – February 2021

Tech: PHP, Laravel, Python, Django, JavaScript

- Delivered client-facing software solutions covering project planning, database design, and full-cycle development
- Built and maintained Laravel and Django applications following clean coding conventions and agile practices
- Diagnosed and resolved application bugs across multiple production systems, improving overall stability

EDUCATION

Master of Science — University of Rajshahi | 2015 – 2017 *Thesis: Parallel Programming with Clustering*

Bachelor of Science — University of Rajshahi | 2011 – 2015

CERTIFICATIONS & ACHIEVEMENTS

- OWASP Top 10:2021 in Python — Secureflag (Mar 2025)
- Laravel & PHP Mastery: Build 5 Real-World Projects — Udemy (Apr 2025)
- ITEE FE (Half Pass)—National IT Engineers Examination, IPA Japan (Mar 2019)
- Rank 2 — Arduino and Robotics Examination, Bangladesh Hi-tech Park Authority (Rajshahi)
- Participant — 48-Hour AI Hackfest, Cefalo Bangladesh Ltd.
